SHOWER CABINETS
CATALOG **2023**

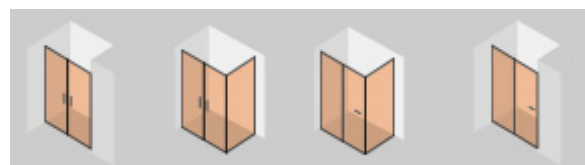

The shower area is the cornerstone of the bathroom space, a place to relax in and allow your thoughts to flow freely at the beginning or end of a long day. Two product ranges and a myriad of models and opening mechanisms have been designed and created for all of your space and functional needs. Turn your everyday relaxation into something special.

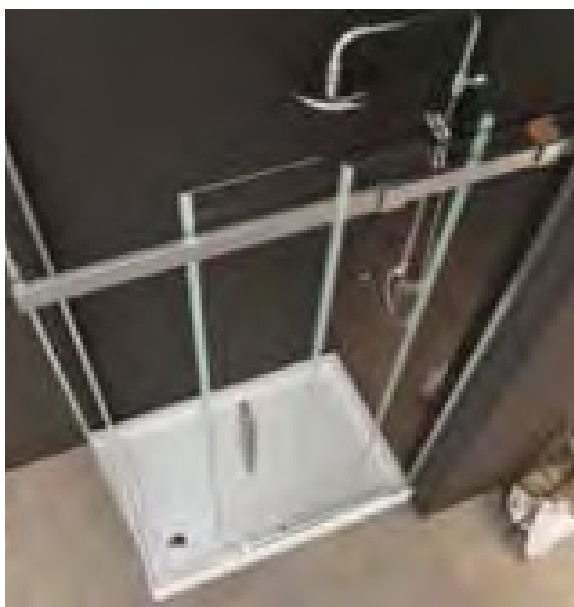

Two types of door mechanisms for a highly functional yet stylish shower solution. The saloon shower consists of two doors that open either inwards or outwards. The bifold door folds back on itself thanks to the strong, slender hinges, reducing the space occupied by the open doors to a minimum

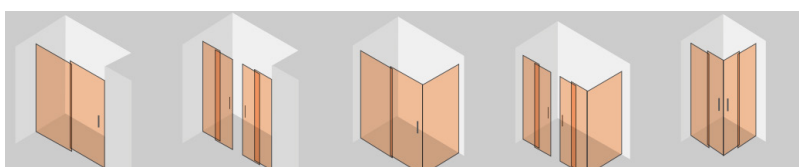

MERCAN

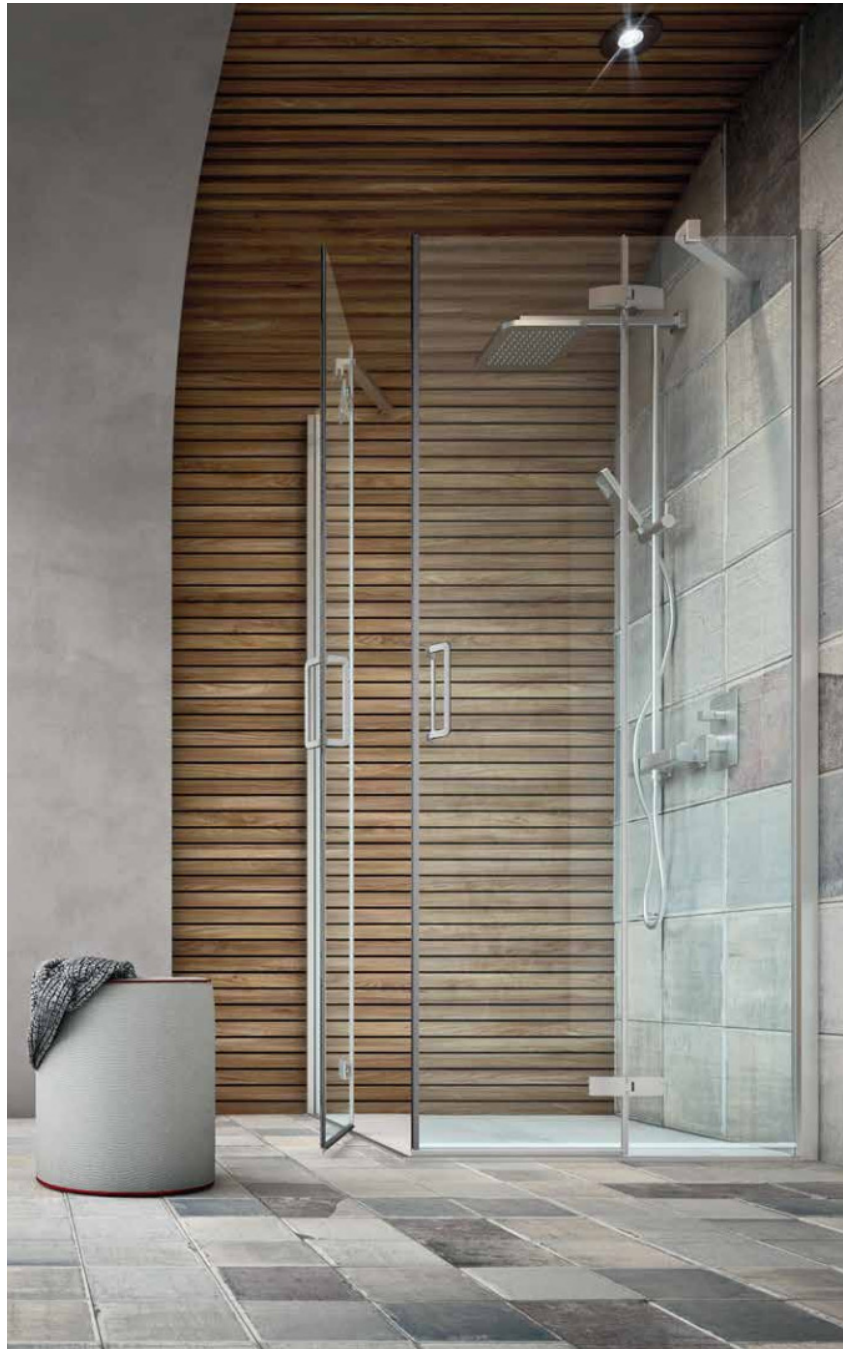

In corner installations, the double sliding door amplifies the shower entrance space. The sleek, modern profiles house the runners and support the weight of the glass panels, to guarantee excellent stability when opening the doors, and a watertight seal when they are closed.

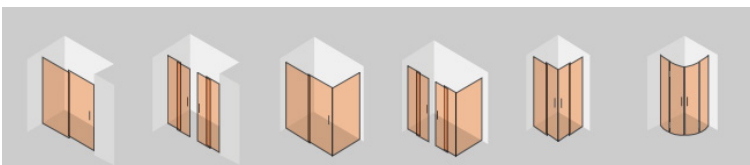

DURU

The door opens easily thanks to the hinges, which are by no means a trivial detail. The quality of the hinges impacts both the look and function of the shower, as the doors open easily. What's more, the hinges are not inside the enclosure, making the glass easier to clean after your shower.

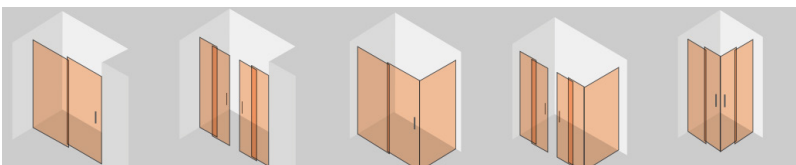

DÜDEN

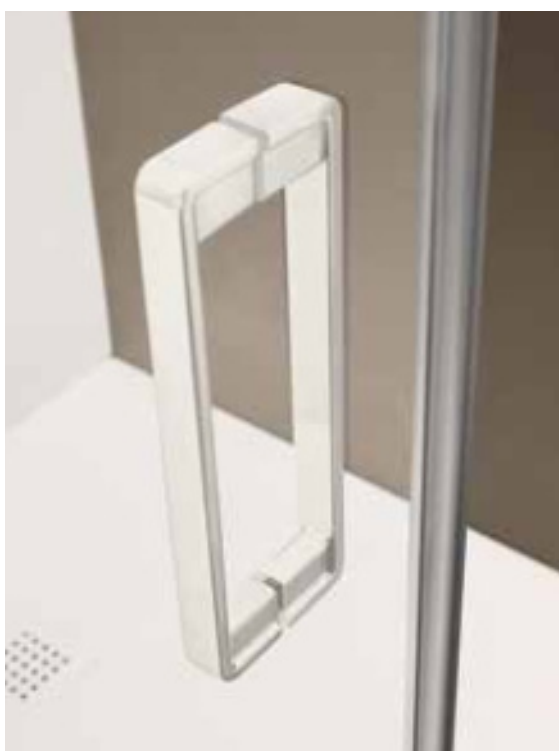

The internal and external handle provides a safe grip, which makes the pivot door even more practical to open. The design is modern and ergonomic, to make it easy to get in the shower, match the profiles around the frame, and blend in perfectly with the style of the bathroom furniture.

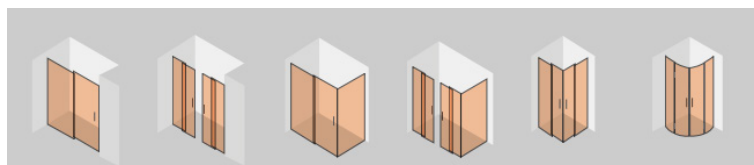

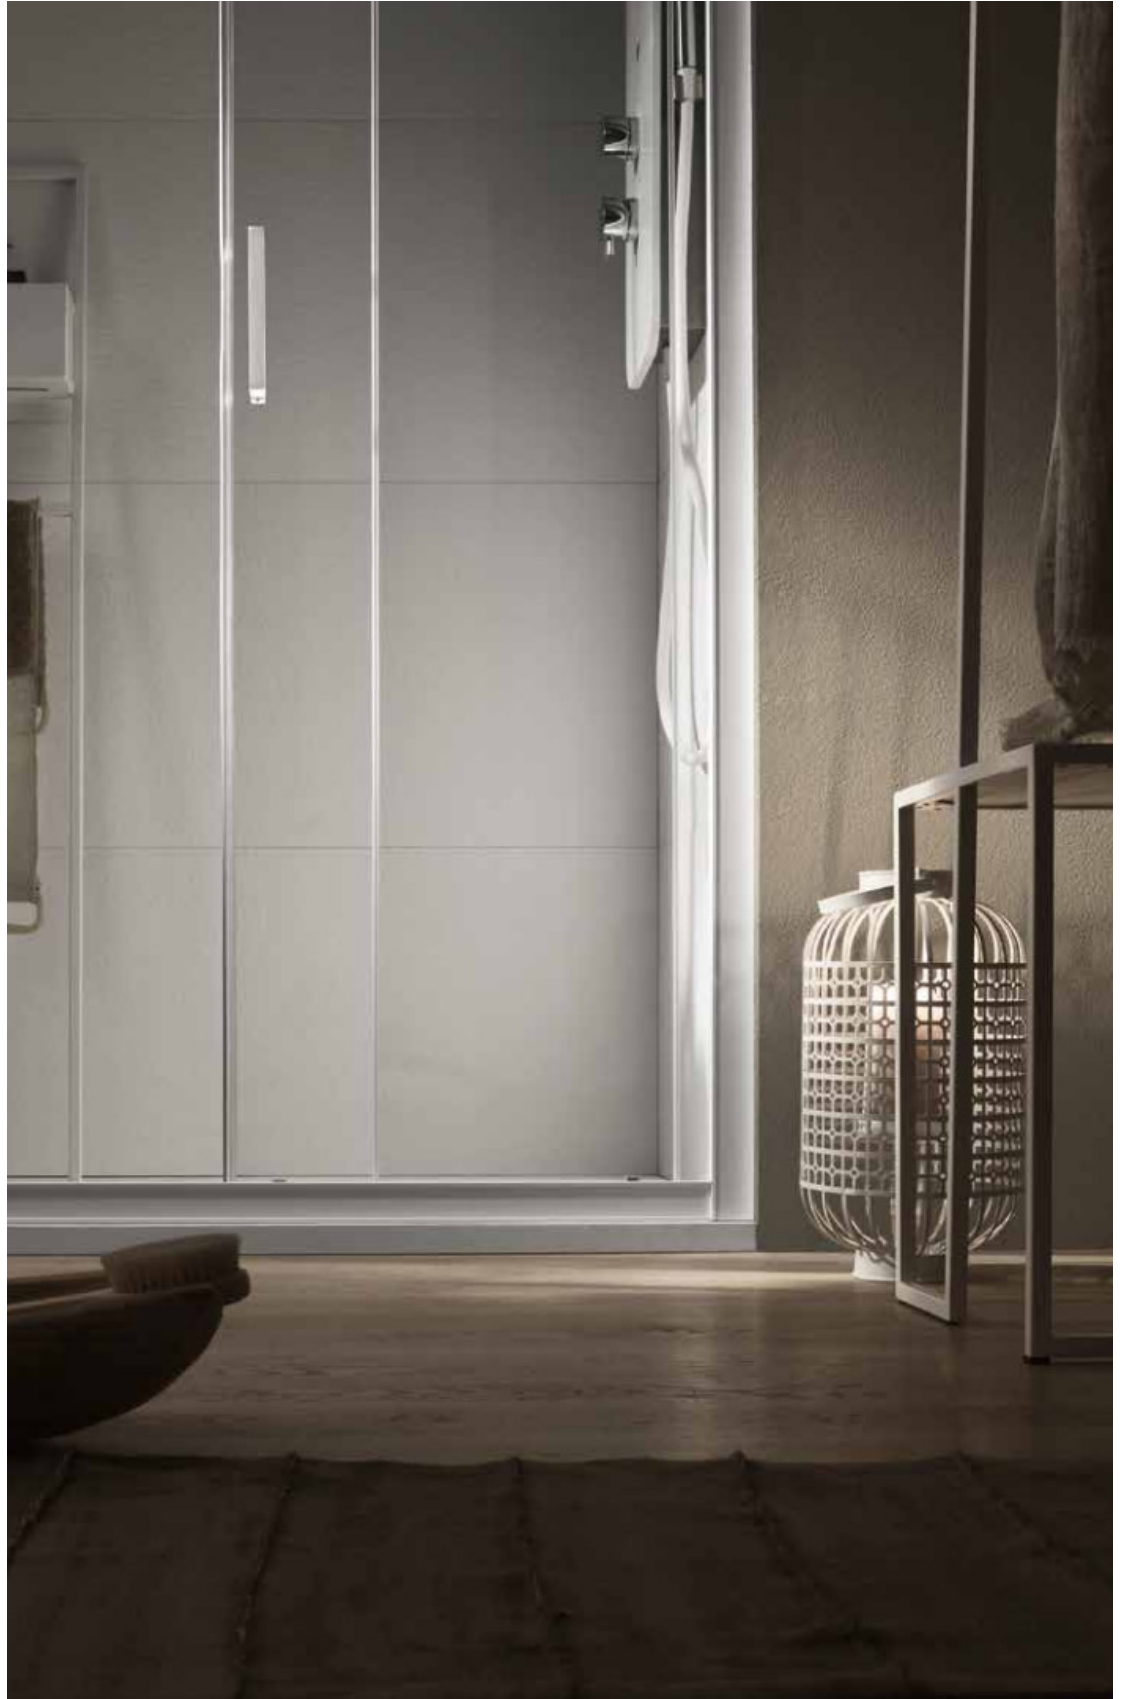

FAVORI

The shower area is finished off with details that add something to the design both in terms of style and function. The vertical handle has a simple design, but guarantees a firm grip. The white profiles hold the glass panels firmly in place, while also giving the shower a modern style.

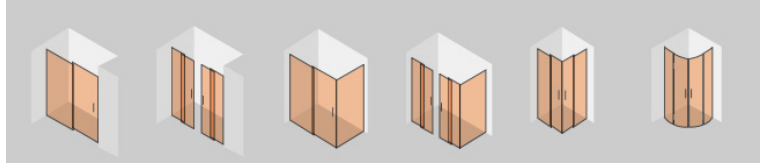

VENUS

The sliding doors are quick and simple to clean, thanks to the easy loosening mechanism. Unhook the glass panels from the runners in one quick go, to reach the part of the door covered by the aluminium profile

ILGIN

The walk-in shower has one or two fixed walls, and no opening or closing mechanisms. There are no doors for getting in or out of the shower. The profiles, seals and support arms ensure the glass panels are stable and the fixtures watertight. Enjoy using your shower space in absolute freedom!
